Dr. Joshua Lederberg
Stanford University Medical School
Palo Alto, California

Dear Dr. Lederberg:

I am assembling a series of published papers to be bound as a book entitled "Selected Papers on the Genetics of *Saccharomyces*." The papers are contributions from outstanding scientists in the fields of microbial and yeast genetics, and radiation biology. Availability of the papers is currently limited to library journals, of which most colleges and universities carry single copy issues only. It is intended that the papers be published by offset printing to reduce the cost of publication. Tentatively, the book will consist of 28 papers, plus a forward, and should run about 300 pages. The book will serve, I believe, as a supplementary or principal text in advanced undergraduate and graduate courses in microbial and yeast genetics, and as a useful reference tool in yeast genetics and related research (radiation biology, biochemical genetics).

I should like to include the paper (s) cited below in the series, and would greatly appreciate receiving two reprints of each, if at all possible. In the event that the reprint supply is low, I will make sure that those forwarded to me will be returned as soon as possible.

Wright, R.E., and Lederberg, J. Extranuclear transmission in yeast heterokaryons. Proc. Natl. Acad. Sci. U.S., 43, 919-923 (1957).

I suggest you reproduce from the journal for best copy. No reprints here.

Sincerely,

David Pittman

David Pittman, Ph.D.
